Abstract: Talking about the importance of evaluation and development of educational processes is a very important topic. This is important for the analysis of students' mastering and learning processes, to determine their level of mastering and to make educational processes more effective. In this thesis, a summary of the preparation of future teachers for innovative activities is expressed.

Keywords: Pedagogical innovations and innovations, Application of innovations in practice, Development of innovative programs according to individual characteristics and requirements of students, Business and community development, Evaluation and development of educational processes.

The main part: For this reason, as a direct continuation of reforms in the field of public education, the Ministry of Public Education of the Republic of Uzbekistan has approved many programs. This state curriculum of the public educational institution is a normative-legal document developed in accordance with the State requirements for the development of school-aged children of the Republic of Uzbekistan, which includes the goals and tasks of the public educational institution, educational - the main ideas of educational activity are expressed, as well as the main competencies of the child for the transition to the next stage of education are defined. This, in turn, requires the organization of pedagogical processes in the public education system on the basis of innovative pedagogical technologies.

To prepare teachers for professional innovative activities, it is possible to create a program that includes the following contents:

- ✓ Pedagogical innovations and innovations: To provide teachers with an understanding of pedagogical innovations and innovations, to introduce them to new teaching methods, technologies and lectures.
- ✓ Innovation in Practice: Training teachers on how to use distance learning tools, online platforms and other technologies to implement innovation in practice.
- ✓ Development of innovative programs according to the individual characteristics and requirements of students: To prepare teachers for the development of innovative programs according to the individual characteristics and requirements of each of the students and to train them accordingly.
- ✓ Entrepreneurship and community development: Provide teachers with an understanding of creating programs for entrepreneurship and community development, developing cooperation among students, using remote business tools and other innovative activities.

Evaluation and development of educational processes: To provide training to teachers on the value analysis necessary for evaluating educational processes, monitoring educational results and introducing new innovative methods.

These contents can help prepare teachers for professional innovative activities and are important for their responsiveness, adoption of innovations and more effective teaching processes.

It is a very important topic to talk about the importance of evaluating and developing educational processes. It is important to analyze the students' acquisition and learning processes, to determine their level of acquisition and to make educational processes more effective.

The following methods can be used to evaluate and develop educational processes:

1. Assessment of Learning Outcomes: Teachers should use opportunities to analyze the learning outcomes of each student to determine their level of learning and understanding of information.
2. Curriculum development: Teachers should use new methods, technologies and tools to develop curricula that match the needs and characteristics of students.
3. Update teaching methods: Teachers should update their teaching methods, use distance learning tools, use innovative methods such as lectures and interactive textbooks to make educational processes more effective.
4. Monitoring and evaluation: Teachers should implement systematic monitoring and evaluation to monitor learning outcomes, assess students' knowledge level, and track their progress.
5. Sharing of educational experience among teachers: Teachers should share their experience with each other in order to share their educational experience, learn new things and make educational processes more effective.

These methods are important for making learning processes more effective and can help teachers to evaluate and develop learning processes.

Conclusion: Our conclusion is that teachers should share their experiences with each other in order to share educational experience, learn new things and make educational processes more effective. The above-mentioned methods are important for making educational processes more effective and can help teachers to evaluate and develop educational processes.
